Conclusion

I - DECODING MULTIBLOCK

MultiBlock: An Emerging Crypto Revolution

- *The cryptocurrency market has been garnering increasing interest due to its potential for growth and attractive returns.*
- *In this landscape, MultiBlock has introduced a revolutionary approach with its **C369 token issuance** through a community-backed guarantee program. With a team of experts and advanced blockchain technology, MultiBlock presents a unique and appealing investment opportunity for the global crypto community.*

I - DECODING MULTIBLOCK

- *MultiBlock is a network that issues cryptocurrencies through a community-backed guarantee program. By dividing **C369** into Blocks using the exponential factor of **2^0 to 2^{16}** , and implementing a distinctive guarantee strategy, MultiBlock has introduced a new and advanced method for token issuance.*
- ***C369 (MultiBlock Crypto 369)** is the common token on the network, issued through a community-backed guarantee program. A total of **17 Blocks** are issued, with each Block being an exponential factor of **2^0 to 2^{16}** , resulting in a doubling of the **C369** quantity in each Block. To issue **1,000 C369**, **500 C369** is burned, and an equivalent value of USDT is contributed.*

II - GUARANTEE PROGRAM WITH C369

Community-Backed Guarantee Program?

One of the standout features of MultiBlock is its community-backed guarantee program. Whenever **500 C369 + USDT** is received, the system initiates the burning of **500 C369** and the issuance of **1 C369 NFT**. **C369 NFT** serves as proof of participation in the guarantee program, offering potential returns after the completion of each Block.

II - GUARANTEE PROGRAM WITH C369

- Thanks to this unique guarantee mechanism, MultiBlock offers returns after each Block. A total of **17 Blocks** are issued with returns ranging from **150 USDT to 1,200 USDT** for each Block. Participants have the opportunity to receive **all 17 reward Blocks**, with a total potential return of up to **10,435.29 USDT**.
- **This creates a significant opportunity for safe investment and high potential returns for the community.**

III - MULTIBLOCK'S STRENGTHS

Transparency

The project works on Blockchain only

Security

Investors join the guarantee program and immediately get back 100% value of their contribution

Multi-applications

MultiBlock ecosystem works with all available Dapps and blocks in the market

IV - CƠ HỘI ĐẦU TƯ

- With a contribution of just **\$300**, into MultiBlock's Block fund (**500 C369 and 150 USDT**), you receive **1,000 C369 (equivalent to \$300)** immediately upon joining. This guarantees a 100% safety for your contributed capital. Additionally, you will receive one **C369 NFT**, which offers the opportunity to earn rewards on the **17 Blocks** following each completed Block issuance. The total potential value you can receive is **10,435.29 USDT**.
- Furthermore, if you decide to **HOLD C369**, the increasing value of C369 with each Block issuance will result in substantial growth for your holdings, offering an enticing opportunity for **compounded returns**.

GUARANTEE RELEASE C369

BITCOIN

1. Bitcoin - Coin Mining and Bitcoin Halving (21M BTC)

- Bitcoin has opened the era of cryptocurrencies with the "Mining Coin" model - a process of creating new cryptocurrencies by solving complex math problems on computers. Every time a new block is added to the blockchain, miners receive a reward in Bitcoin.
- Bitcoin's special feature is the "Halving" policy - a process of halving the amount of BTC issued every 4 years. With a total supply of 21 million BTC, this mechanism helps limit the amount of BTC in the market, creating an element of scarcity and increasing the value of BTC over time.

ETHEREUM

2. Ethereum - Coin Mining (POS from POW) (121M ETH, unlimited supplies)

- Ethereum originally used a "Mining Coin" model similar to Bitcoin. However, Ethereum's plan is to move from Proof of Work (POW) to Proof of Stake (POS). In POS mode, users need to deposit an amount into the system to have the right to participate in the evaluation and transaction confirmation. This change saves energy and reduces transaction fees.
- Unlike Bitcoin, Ethereum has no total supply limit. With this new operating model, the amount of ETH will be limitless and the potential for further growth will be superior in the future.

MULTIBLOCK

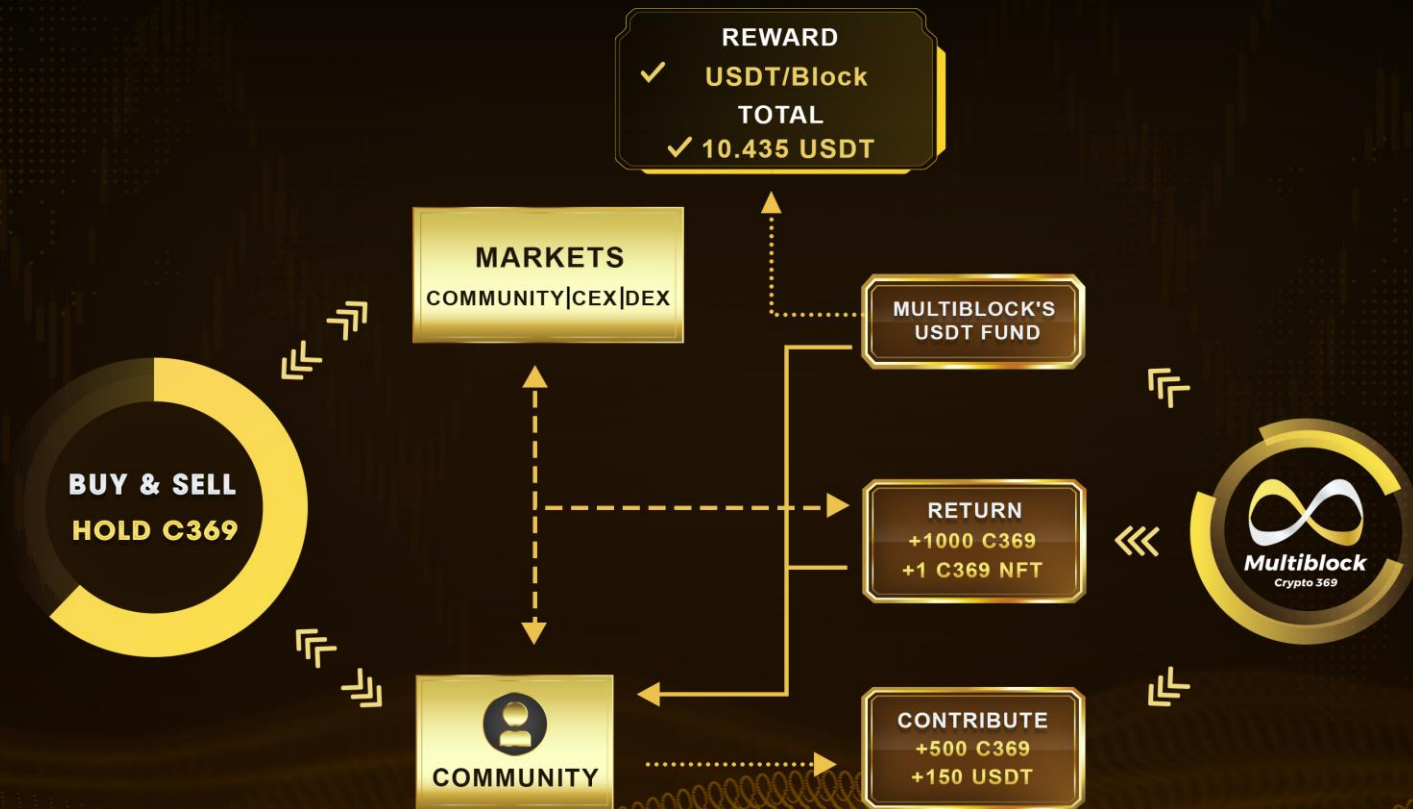

3. MultiBlock - Community-backed Guarantee (131,071,369,000 C369)

- MultiBlock brings a new revolution in the field of cryptocurrencies through the model of issuing certificates from the community. **C369** is issued in exponential blocks of 2^0 to 2^{16} , for a total of **17 Blocks**. Every time **500 C369 and USDT** equivalent are reached, **500 C369** will be burned and **1 C369 NFT** will be issued.
- The special feature of MultiBlock is the burning of 50% of the total supply. This helps to reduce the supply and increase the demand for **C369** ownership in the market, thereby increasing the value of **C369**. MultiBlock works on multiple blockchains (Multichain), including Bitcoin, Ethereum, BSC, TRON and many others, facilitating the development and integration of the project..

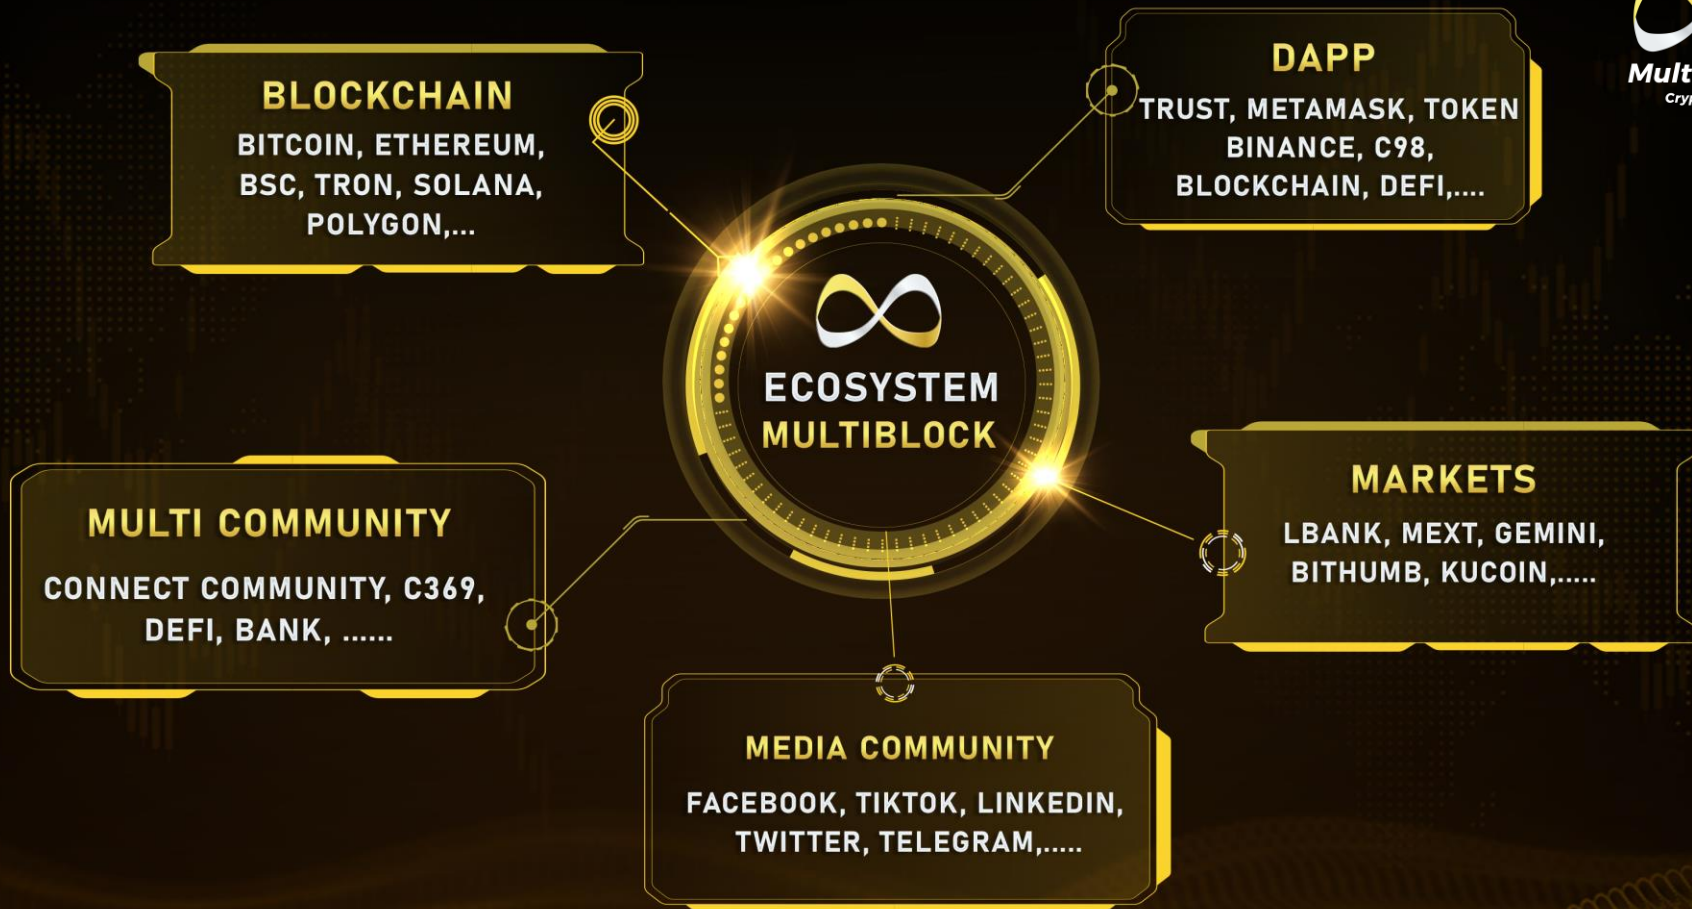

V - BITCOIN | ETHEREUM | MULTIBLOCK COMPARISON

- *Each cryptocurrency project has its own issuance and operating model, offering different features and potentials. There are Bitcoin with a "Coin Mining" model and a "Halving" policy that limits the total supply and Ethereum moving from POW to POS with unlimited supply.*
- *Depending on investment needs and development potential, investors can choose to invest in the right cryptocurrency project. Carefully selecting and being well-informed about each project will help you make the most of the investment opportunities and potential in the cryptocurrency market.*

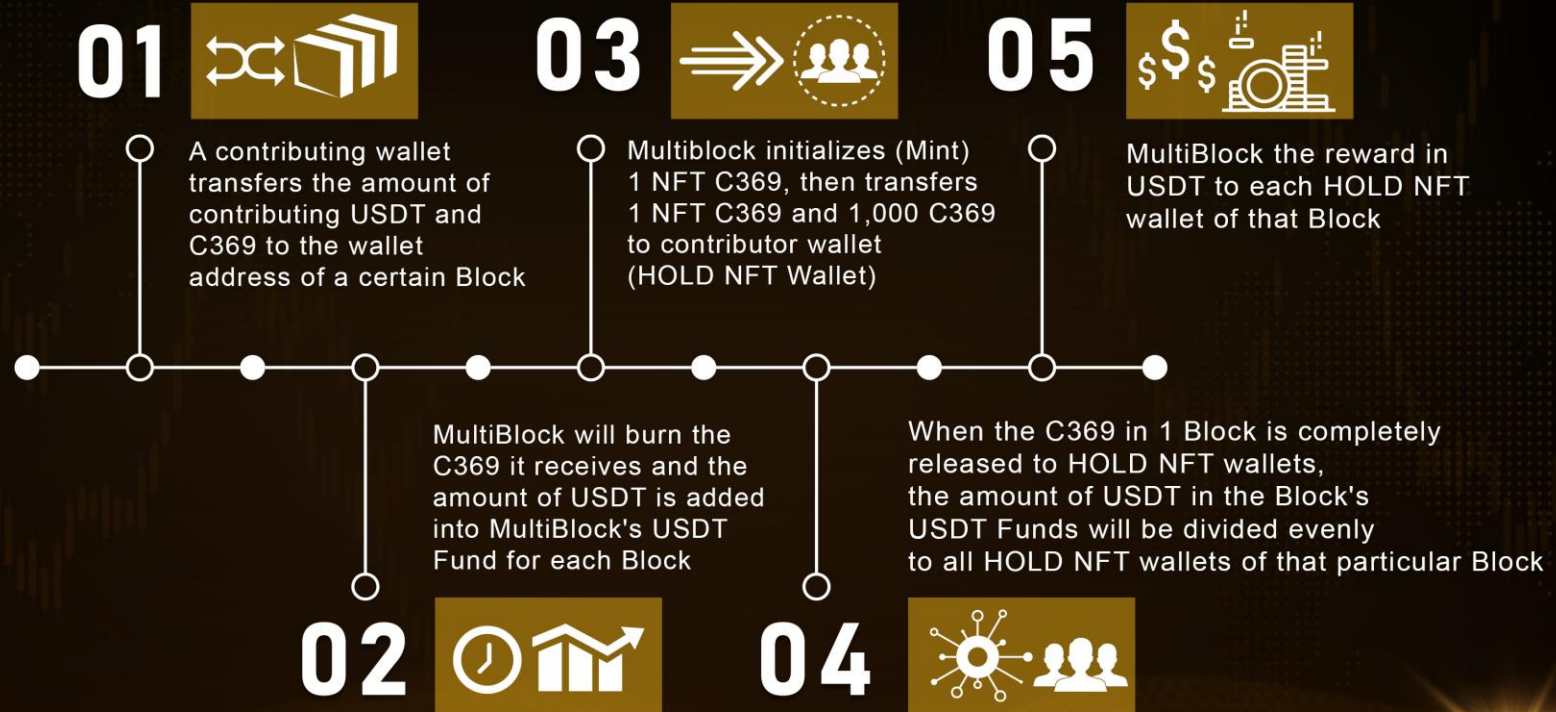

GUARANTEE RELEASE C369

VI - ECOSYSTEM

VII – GUARANTEE INSTRUCTIONS

VIII - CONCLUSION

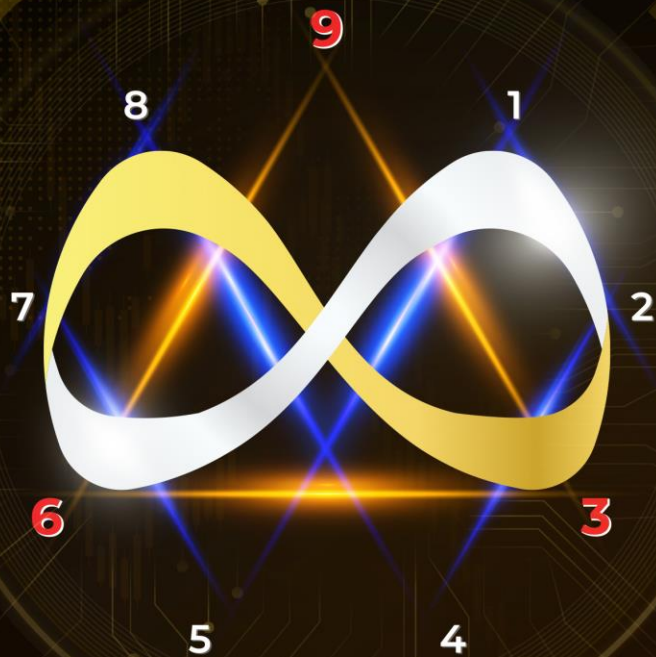

Appealing Investment Opportunity from C369 and MultiBlock

- **C369 and MultiBlock** brings out a new revolution in crypto investment.
- The community backed guarantee model ensures the transparency and fairness.
- With just **\$300**, you get **1,000 C369** immediately and a chance for a reward of up to **10,435.29 USDT**.
- That **50% C369 is burnt** makes the value increase and limits the supply.
- Investors can either sell **1,000 C369** immediately to safely get back 100% of the initial capital or **HOLD C369** for future selling at about 10 - 100 times the original price.
- The project works on multiple blockchains making the investment plans flexible and diversified
